

## Summary Prospectus

February 12, 2025

### Sprott Active Gold & Silver Miners ETF (Nasdaq: GBUG)

Before you invest, you may want to review the Fund's prospectus, which contains more information about the Fund and its risks. You can find the Fund's prospectus (including amendments and supplements) and other information about the Fund, including the Fund's statement of additional information and shareholder reports, online at <https://www.sprottetfs.com>. You can also get this information at no cost by calling 888.622.1813, or from your financial professional. The Fund's prospectus and statement of additional information, both dated February 12, 2025, as amended and supplemented from time to time, are incorporated by reference into (legally made a part of) this Summary Prospectus. Information on the Fund's net asset value, market price, premiums and discounts, and bid-ask spreads can be found at <https://www.sprottetfs.com>.

This Summary Prospectus contains information you should know before investing, including information about risks. Please read it before you invest and keep it for future reference.

**The Securities and Exchange Commission has not approved or disapproved these securities or passed upon the adequacy of this Prospectus. Any representation to the contrary is a criminal offense.**

## Investment Objective

The Sprott Active Gold & Silver Miners ETF (the “Fund”) seeks to provide long-term capital appreciation.

## Fund Fees and Expenses

The table below describes the fees and expenses that you pay if you buy, hold and sell shares of the Fund (“Shares”). **You may pay other fees, such as brokerage commissions and other fees to financial intermediaries, which are not reflected in the table and example below.**

**Shareholder Fees** (fees paid directly from your investment) **None**

**Annual Fund Operating Expenses** (expenses that you pay each year as a percentage of the value of your investment)

Management Fee	0.89%
Distribution and Service (12b-1) Fee	None
Other Expenses	0.00%
Total Annual Fund Operating Expenses	0.89%

## Example

This Example is intended to help you compare the cost of investing in the Fund with the cost of investing in other funds. The Example assumes that you invest \$10,000 in the Fund for the time periods indicated and then sell all of your shares at the end of those periods. The Example also assumes that your investment has a 5% return each year and that the Fund’s operating expenses remain the same.

	1 Year	3 Years
Although your actual costs may be higher or lower, based on these assumptions your costs would be:	\$91	\$284

## Portfolio Turnover

The Fund pays transaction costs, such as commissions, when it purchases and sells securities (or “turns over” its portfolio). A higher portfolio turnover rate may result in higher transaction costs and higher taxes when shares are held in a taxable account. These costs, which are not reflected in annual fund operating expenses or in the Example, may affect the Fund’s performance. Because the fund is newly organized, no portfolio turnover figures are available for the Fund.

## Principal Investment Strategies of the Fund

The Fund seeks to achieve its investment objective by investing 80% of its net assets in shares of gold and silver, focused companies that are engaged in exploring, developing and mining; or royalty and streaming companies engaged in the financing of gold and silver assets. A company is a gold or silver focused company if it earns at least 50% of its from revenue or has at least 50% of its assets dedicated to exploring, developing or mining gold or silver and royalties and streaming companies engaged in the financing of gold or silver. The Fund may invest in companies focused on other precious metals, although no more than 20% of its net assets will be invested in such companies.

The investment strategy of the Fund is value oriented and contrarian.

The Fund seeks to invest in undervalued companies the portfolio managers’ believe to have good long-term business fundamentals and/or growth potential but are temporarily out of favor with investors, and hence have a market value lower than their intrinsic value. In assessing intrinsic value, the portfolio managers’ judgments will be based on a comparison of a company’s stock market value with various financial parameters, including historical and projected cash flow, book earnings, and net asset value (“NAV”). The fundamental research-based, value orientation of Sprott Asset Management USA, Inc., the adviser to the Fund (the “Adviser”), assists the portfolio managers find companies with intrinsic value.

The Adviser’s contrarian orientation enables the portfolio managers to buy securities of companies at what the portfolio managers believe to be attractive prices. Contrarian means that the portfolio managers seek investment opportunities in stocks and sectors that are out of favor with investors. The portfolio managers consider a stock to be out of favor when its price has declined significantly or has lagged the relevant market index for an extended period and the consensus among investors does not expect improvement. Selection criteria include asset quality, geopolitical risk, balance sheet analysis, capital commitments, current and prospective cash flow generation, return on capital, and most importantly, management structure. In general, the portfolio managers seek companies that are characterized by strong management structure, business franchise, competitive position and financial structure, a clear strategy, free cash flow, large insider ownership, and shareholder-oriented policies, among other things.

Investments are made with the intent to buy and hold the securities for 3 to 5 years. Position sizes will range between 0.5% to 15%. The Adviser's sell discipline incorporates judgements as to valuation, shortfalls of performance relative to our internally established benchmarks, or tactical trims based on position size for risk management purposes. The portfolio managers will purchase stocks for the Fund when they meet the above criteria and when the portfolio managers believe that they have a limited risk of further decline. The portfolio managers will sell stocks when they are no longer considered to be good values.

The Fund may invest in foreign companies, including companies in emerging markets (i.e. those that generally are in the early stages of their industrial cycles). The Fund may invest a significant portion of its assets in securities of companies in a single country or region, such as Australia, Brazil, Canada, Mexico, New Zealand, South Africa and the United Kingdom. The Fund may invest in companies of any size or market capitalization range.

The Fund is non-diversified and may invest a greater percentage of its assets in a particular issuer than a diversified fund. The Fund will concentrate its investments in companies in the mining industry. The Fund may from time to time invest a significant portion of its assets in the securities of companies in one or more sectors.

The Fund may engage in securities lending.

### **Principal Risks of Investing in the Fund**

***There is no assurance that the Fund will meet its investment objective. The value of your investment in the Fund, as well as the amount of return you receive on your investment in the Fund, may fluctuate significantly. You may lose part or all of your investment in the Fund or your investment may not perform as well as other similar investments. Therefore, you should consider carefully the following risks before investing in the Fund.***

***Investors in the Fund should be willing to accept a high degree of volatility in the price of the Fund's shares and the possibility of significant losses. An investment in the Fund involves a substantial degree of risk. Therefore, you should consider carefully the following risks before investing in the Fund.***

***Gold Mining Risk.*** The profitability of companies in the gold mining industry is related to, among other things, the worldwide price of gold and the costs of extraction and production. The Fund is sensitive to changes in, and its performance will depend to a greater extent on, the overall condition of the gold mining industry. In times of stable economic growth, traditional equity and debt investments could offer greater appreciation potential and the value of gold may be adversely affected, which could in turn affect the Fund's returns. The gold industry can be significantly affected by competitive pressures, central bank operations, events relating to international political developments, the success of exploration projects, commodity prices, adverse environmental developments and tax and government regulations.

***Silver Mining Risk.*** The profitability of companies in the silver mining industry is related to, among other things, the worldwide price of silver and the costs of extraction and production. The Fund is sensitive to changes in, and its performance will depend to a greater extent on, the overall condition of the silver mining industry. In times of stable economic growth, traditional equity and debt investments could offer greater appreciation potential and the value of silver may be adversely affected, which could in turn affect the Fund's returns. The silver industry can be significantly affected by competitive pressures, central bank operations, events relating to international political developments, the success of exploration projects, commodity prices, adverse environmental developments and tax and government regulations.

***Relationship to Gold and Silver Risk.*** The Fund invests in companies engaged in gold and silver mining and related services in the precious metal sector. The Fund does not measure the performance of a direct investment in gold and silver and, therefore, may not move in the same direction and to the same extent as the spot prices of gold and silver.

***Active Management Risk.*** The Adviser's judgments about the growth, value, or potential appreciation of an investment may prove to be incorrect or fail to have the intended results, which could adversely impact the Fund's performance and cause it to underperform relative to other funds with similar investment goals or relative to its benchmark, or not to achieve its investment goal. This underperformance may be exacerbated by the universe of securities in which the Fund is authorized to invest as compared to other types of ETFs or mutual funds.

***Authorized Participant Concentration Risk.*** Only an Authorized Participant (as defined in the Creations and Redemptions section of the Fund's prospectus) may engage in creation or redemption transactions directly with the Fund. The Fund has a limited number of institutions that act as Authorized Participants. To the extent that these institutions exit the business or are unable to proceed with creation and/or redemption orders with respect to the Fund and no other Authorized Participant is able to step forward to create or redeem Creation Units, Fund shares may trade at a discount to net asset value per share ("NAV") and possibly face trading halts and/or delisting.

***Commodity Risk.*** The Fund invests in companies that are susceptible to fluctuations in certain commodity markets and to price changes due to trade relations. Any negative changes in commodity markets that may be due to changes in supply and demand for commodities, market events, regulatory developments, other catastrophic events, or other factors that the Fund cannot control could have an adverse impact on those companies.

*Common Stock Risk.* Common stock holds the lowest priority in the capital structure of a company, and, therefore, takes the largest share of the company's risk and its accompanying volatility. The value of the common stock held by the Fund may fall due to general market and economic conditions, perceptions regarding the industries in which the issuers of securities held by the Fund participate, or facts relating to specific companies in which the Fund invests.

*Currency Risk.* The Fund may invest its assets in securities denominated in non-U.S. currencies. Changes in currency exchange rates and the relative value of non-U.S. currencies will affect the value of the Fund's investment and the value of the Shares. Because the Fund's NAV is determined in U.S. dollars, the Fund's NAV could decline if the currency of the non-U.S. market in which the Fund invests depreciates against the U.S. dollar, even if the value of the Fund's holdings, measured in the foreign currency, increases. Currency exchange rates can be very volatile and can change quickly and unpredictably. As a result, the value of an investment in the Fund may change quickly and without warning and you may lose money.

*Cybersecurity and Disaster Recovery Risks.* Information and technology systems relied upon by the Fund, the Adviser, the Fund's other service providers (including, but not limited to, the Fund Accountant, Custodian, Transfer Agent, Administrator, Distributor and index providers), market makers, Authorized Participants, financial intermediaries and/or the issuers of securities in which the Fund invests may be vulnerable to damage or interruption from computer viruses, network failures, computer and telecommunication failures, infiltration by unauthorized persons, security breaches, usage errors, power outages and catastrophic events such as fires, tornadoes, floods, hurricanes and earthquakes.

*Depository Receipt Risk.* The Fund may invest in depository receipts which involve similar risks to those associated with investments in foreign securities. Investments in depository receipts may be less liquid than the underlying shares in their primary trading market and, if not included in the Index, may negatively affect the Fund's ability to replicate the performance of the Index.

*Early Close/Trading Halt Risk.* An exchange or market may close or issue trading halts on specific securities, or the ability to buy or sell certain securities or financial instruments may be restricted, which may result in the Fund being unable to buy or sell certain securities or financial instruments. In such circumstances, the Fund may be unable to rebalance its portfolio, may be unable to accurately price its investments and/or may incur substantial trading losses.

*Emerging Markets Securities Risk.* Emerging markets are subject to greater market volatility, lower trading volume, political and economic instability, uncertainty regarding the existence of trading markets and more governmental limitations on foreign investment than more developed markets. Differences in regulatory, accounting, auditing, and financial reporting and recordkeeping standards could impede the Adviser's ability to evaluate local companies and impact the Fund's performance. Investments in securities of issuers in emerging markets may also be exposed to risks related to a lack of liquidity, greater potential for market manipulation, issuers' limited reliable access to capital, and foreign investment structures.

*Fluctuation of Net Asset Value Risk.* The NAV of the Fund's shares will generally fluctuate with changes in the market value of the Fund's holdings. The market prices of the shares will generally fluctuate in accordance with changes in NAV as well as the relative supply of and demand for shares on The Nasdaq Stock Market LLC (the "Exchange"). The Adviser cannot predict whether the shares will trade below, at or above their NAV. The Fund's market price may deviate from the value of its underlying portfolio holdings, particularly in times of market stress, with the result that investors may pay significantly more or receive significantly less than the underlying value of the Fund shares bought or sold. This can be reflected as a spread between the bid and ask prices for the Fund quoted during the day or a premium or discount in the closing price from the Fund's NAV.

*Foreign Investment Risk.* The Fund's investments in non-U.S. issuers, although limited to ADRs, may involve unique risks compared to investing in securities of U.S. issuers. Adverse political, economic or social developments could undermine the value of the Fund's investments or prevent the Fund from realizing the full value of its investments. Countries with emerging markets may present heightened risks of nationalization of businesses, restrictions on foreign ownership and prohibitions on the repatriation of assets. The economies of emerging markets countries also may be based on only a few industries, making them more vulnerable to changes in local or global trade conditions and more sensitive to debt burdens, inflation rates or adverse news and events. Where all or a portion of the Fund's underlying securities trade in a market that is closed when the market in which the Fund's shares are listed and trading in that market is open, there may be changes between the last quote from its closed foreign market and the value of such security during the Fund's domestic trading day. In addition, please note that this in turn could lead to differences between the market price of the Fund's shares and the underlying value of those shares.

*Frontier Markets Risk.* Frontier markets are those emerging markets that are considered to be among the smallest, least mature and least liquid, and as a result, may be more likely to experience inflation, political turmoil and rapid changes in economic conditions than more developed and traditional emerging markets. Economic, political, illiquidity and currency risks may be more pronounced with respect to investments in frontier markets than in emerging markets.

*Geographic Investment Risk.* To the extent the Fund invests a significant portion of its assets in the securities of companies of a single country or region, it is more likely to be impacted by events or conditions affecting that country or region.

Australia. Investments in Australian issuers may subject the Fund to economic risk specific to Australia. Among other things, there are legal, regulatory, political, currency and economic risk specific to Australia. The Australian economy is heavily dependent on relationships with certain key trading partners, including China, Japan and the United States. As a result, continued growth of the Australian economy is dependent on the growth of these economies.

Brazil. Investment in Brazilian issuers involves risks that are specific to Brazil, including legal, regulatory, political, currency and economic risks. The Brazilian economy has historically been exposed to high rates of inflation and a high level of debt, each of which may reduce and/or prevent economic growth.

Canada. Investments in Canadian issuers may subject the Fund to economic risk specific to Canada. Among other things, the Canadian economy is heavily dependent on relationships with certain key trading partners, including the United States and China. The Canadian economy is sensitive to fluctuations in certain commodity markets.

Mexico. Investment in Mexican issuers may subject the Fund to economic risk specific to Mexico. Among other things, the Mexican economy is heavily dependent on trading with key partners, specifically the United States and certain Latin American countries. Any increases or decreases in the volume of this trading, changes in taxes or tariffs, or variance in political relationships between nations may impact the economy in a way that would be adverse to the Fund's investments. Mexico is an emerging market and demonstrates significantly higher volatility from time to time in comparison to developed markets. Shareholder claims that are available in the U.S., as well as regulatory oversight and authority that is common in the U.S., including for claims based on fraud, may be difficult or impossible for shareholders of securities in Mexico or for U.S. authorities to pursue. Additionally, investment in Mexico may be subject to substantial economic instability resulting from, among other things, periods of very high inflation, high interest rates, economic volatility, high unemployment rates and significant devaluations of the Mexican currency, the peso, as well as destabilizing events caused by local insurrections, social upheavals, drug related violence and public health crises.

New Zealand. Investments in New Zealand issuers may subject the Fund to economic risk specific to New Zealand. Among other things, there are legal, regulatory, political, currency and economic risk specific to New Zealand. The New Zealand economy is heavily dependent on relationships with certain key trading partners, including China, Japan and the United States. As a result, continued growth of the New Zealand economy is dependent on the growth of these economies.

South Africa. South Africa's two-tiered economy, with one rivaling developed countries and the other exhibiting many characteristics of developing countries, is characterized by uneven distribution of wealth and income and high rates of unemployment. Although economic reforms have been enacted to promote growth and foreign investments, there can be no assurance that these programs will achieve the desired results. In addition, South Africa's inadequate currency reserves have left its currency vulnerable, at times, to devaluation. Despite significant reform and privatization, the South African government continues to control a large share of South African economic activity. Heavy regulation of labor and product markets is pervasive and may stifle South African economic growth or cause prolonged periods of recession. The agriculture and mining sectors of South Africa's economy account for a large portion of its exports, and thus the South African economy is susceptible to fluctuations in these commodity markets.

United Kingdom. The United Kingdom trades heavily with other European countries and the United States and may be impacted by changes to the economic health of their key trading partners. The United Kingdom also relies heavily on the export of financial services. Accordingly, a downturn in the financial services sector may have an adverse impact on the United Kingdom's economy.

*Investment Risk.* An investment in the Fund is subject to investment risk including the possible loss of the entire principal amount that you invest.

*Issuer-Specific Risk.* The value of an individual security or particular type of security can be more volatile than the market as a whole and can perform differently from the value of the market as a whole.

*Large-Capitalization Risk.* Returns on investments in securities of large companies could trail the returns on investments in securities of smaller and mid-sized companies. The securities of large-capitalization companies may also be relatively mature compared to smaller companies and therefore subject to slower growth during times of economic expansion. Large-capitalization companies may also be unable to respond quickly to new competitive challenges, such as changes in technology and consumer tastes.

*Liquidity Risk.* It may be more difficult for the Fund to buy and sell significant amounts of some securities without an unfavorable impact on prevailing market prices. As a result, these securities may be difficult to dispose of at a fair price at the times when the Sub-Adviser believes it is desirable to do so.

*Metals and Mining Industry Risk.* Companies in the metals and mining industry are susceptible to fluctuations in worldwide metal prices and extraction and production costs. In addition, metals and mining companies may have significant operations in areas at risk for social and political unrest, security concerns and environmental damage. These companies may also be at risk for increased government regulation and intervention. Such risks may adversely affect the issuers to which the Fund has exposure.

*Micro-Capitalization Company Risk.* Micro-cap stocks involve substantially greater risks of loss and price fluctuations because their earnings and revenues tend to be less predictable (and some companies may be experiencing significant losses), and their share prices tend to be more volatile. The shares of micro-cap companies tend to trade less frequently than those of larger, more established companies, which can adversely affect the pricing of these securities and the future ability to sell these securities.

*New Fund Risk.* A new or smaller fund is subject to the risk that its performance may not represent how the fund is expected to or may perform in the long term. In addition, new funds have limited operating histories for investors to evaluate and new and smaller funds may not attract sufficient assets to achieve investment and trading efficiencies. There can be no assurance that the Fund will achieve an economically viable size. Further, an active trading market for shares of the Fund may not develop or be maintained.

*Non-Diversified Fund Risk.* The Fund is considered non-diversified and can invest a greater portion of assets in securities of individual issuers than a diversified fund. As a result, changes in the market value of a single investment could cause greater fluctuations in share price than would occur in a diversified fund.

*Operational Risk.* The Fund and its service providers may experience disruptions that arise from human error, processing and communications errors, counterparty or third-party errors, technology or systems failures, any of which may have an adverse impact on the Fund.

*Precious Metals Mining Industry Risk.* The Fund is sensitive to changes in, and its performance will depend to a greater extent on, the overall condition of the precious metals mining industry. In times of stable economic growth, traditional equity and debt investments could offer greater appreciation potential and the value of a precious metal may be adversely affected, which could in turn affect the Fund's returns. The precious metals industry can be significantly affected by competitive pressures, central bank operations, events relating to international political developments, the success of exploration projects, commodity prices, adverse environmental developments and tax and government regulations.

*Sector Focus Risk.* The Fund may invest a significant portion of its assets in one or more sectors and thus will be more susceptible to the risks affecting those sectors.

*Mining Sector Risk.* The exploration and development of mineral deposits involve significant financial risks over a significant period of time, which even a combination of careful evaluation, experience and knowledge may not eliminate. Few properties which are explored are ultimately developed into producing mines. Major expenditures may be required to establish reserves by drilling and to construct mining and processing facilities at a site. In addition, mineral exploration companies typically operate at a loss and are dependent on securing equity and/or debt financing, which might be more difficult to secure for an exploration company than for a more established counterpart.

*Securities Lending Risk.* Although the Fund will receive collateral in connection with all loans of its securities holdings, the Fund would be exposed to a risk of loss should a borrower default on its obligation to return the borrowed securities (e.g., the loaned securities may have appreciated beyond the value of the collateral held by the Fund). In addition, the Fund will bear the risk of loss of any cash collateral that it invests.

*Silver Mining Industry Risk.* The Fund is sensitive to changes in, and its performance will depend to a greater extent on, the overall condition of the silver mining industry. In times of stable economic growth, traditional equity and debt investments could offer greater appreciation potential and the value of silver may be adversely affected, which could in turn affect the Fund's returns. The silver industry can be significantly affected by competitive pressures, central bank operations, events relating to international political developments, the success of exploration projects, commodity prices, adverse environmental developments and tax and government regulations.

*Small- and Mid-Capitalization Company Risk.* Smaller and mid-size companies often have narrower markets, less liquidity, more limited managerial and financial resources and a less diversified product offering than larger, more established companies. As a result, their performance can be more volatile, which may increase the volatility of the Fund's portfolio.

*Trading Risk.* Shares of the Fund may trade on the Exchange, above (premium) or below (discount) their NAV. The NAV of shares of the Fund will fluctuate with changes in the market value of the Fund's holdings. The market prices of the Fund's shares will fluctuate continuously throughout trading hours based on market supply and demand and may deviate significantly from the value of the Fund's holdings, particularly in times of market stress, with the result that investors may pay more or receive less than the underlying value of the Fund shares bought or sold. When buying or selling shares in the secondary market, you may incur costs attributable to the difference between the highest price a buyer is willing to pay to purchase shares of the Fund (bid) and the lowest price a seller is willing to accept for shares of the Fund (ask), which is known as the bid-ask spread. In addition, although the Fund's shares are currently listed on the Exchange, there can be no assurance that an active trading market for shares will develop or be maintained. Trading in Fund shares may be halted due to market conditions or for reasons that, in the view of the Exchange, make trading in shares of the Fund inadvisable. In stressed market conditions, the market for the Fund's shares may become less liquid in response to deteriorating liquidity in the markets for the Fund's underlying portfolio holdings.

**Performance**

Because the Fund has not yet launched, the performance section is omitted. In the future, performance information will be presented in this Prospectus. Also, shareholder reports containing financial and performance information will be mailed to shareholders semi-annually.

**Management***Adviser*

Sprott Asset Management USA, Inc. is the investment adviser to the Fund.

*Sub-Adviser*

ALPS Advisors, Inc. is the sub-adviser to the Fund.

*Portfolio Managers*Sprott Asset Management USA, Inc. (Adviser)

John Hathaway, Senior Portfolio Manager of Sprott Asset Management USA Inc., has served as a portfolio manager of the Fund since its inception in February 2025. Maria Smirnova, Senior Portfolio Manager of Sprott Asset Management LP and an associated person of Sprott Asset Management USA Inc., has served as a portfolio manager of the Fund since its inception in February 2025. Shree Kargutkar, Portfolio Manager of Sprott Asset Management LP and an associated person of Sprott Asset Management USA Inc., has served as portfolio manager of the Fund since its inception in February 2025. Justin Tolman, Portfolio Manager of Sprott Asset Management USA Inc has served as portfolio manager of the Fund since its inception in February 2025.

ALPS Advisors, Inc. (Sub-Adviser)

Ryan Mischker, Senior Vice President, Portfolio Management & Research, Andrew Hicks, Senior Vice President, Director of ETF Portfolio Management & Research, and Charles Perkins Associate Vice President, Portfolio Management & Research at ALPS Advisors, Inc., are responsible for the day-to-day management of the Fund. Mr. Mischker, Mr. Hicks and Mr. Perkins have each served in such capacity since the Fund's inception in February 2025.

**Purchase and Sale of Fund Shares**

The Fund issues and redeems shares at NAV only in a large specified number of shares each called a "Creation Unit," or multiples thereof, and only with "authorized participants" that have entered into contractual arrangements with ALPS Distributors, Inc., the Fund's distributor ("Distributor"). A Creation Unit consists of 10,000 shares. Creation Unit transactions are typically conducted in exchange for the deposit or delivery of in-kind securities in the Fund's portfolio and/or cash.

Individual shares of the Fund may only be purchased and sold on the Exchange through brokers. Shares of the Fund are listed on the Exchange and because shares will trade at market prices rather than NAV, shares of the Fund may trade at a price greater than or less than NAV. An investor may incur costs attributable to the difference between the highest price a buyer is willing to pay to purchase shares of the Fund (bid) and the lowest price a seller is willing to accept for shares of the Fund (ask) when buying or selling shares in the secondary market (the "bid-ask spread").

Information regarding the Fund's NAV, market price, premiums and discounts, and bid-ask spreads can be viewed on the Fund's website at [www.sprottets.com](http://www.sprottets.com).

**Tax Information**

Fund distributions are generally taxable as ordinary income, qualified dividend income, or capital gains (or a combination), unless your investment is in an individual retirement account ("IRA") or other tax-advantaged account. Distributions on investments made through tax-deferred arrangements may be taxed later upon withdrawal of assets from those accounts.

**Payments to Broker-Dealer and Other Financial Intermediaries**

If you purchase shares through a broker-dealer or other financial intermediary, the Adviser or other related companies may pay the intermediary for the sale of shares or related services. These payments may create a conflict of interest by influencing the broker-dealer or other intermediary and your salesperson to recommend the Fund over another investment. Ask your salesperson or visit your financial intermediary's website for more information.
