

Sprott Uranium Miners ETF (NYSE Arca: URNM) is the only[^] ETF to provide pure-play^{^^} exposure to uranium miners and physical uranium essential to nuclear power. **URNM** seeks to invest at least 80% of its total assets in securities of the North Shore Global Uranium Mining Index (URNMX). The Index is designed to track the performance of companies that devote at least 50% of their assets to the uranium mining industry, which may include mining, exploration, development and production of uranium, or holding physical uranium, owning uranium royalties or engaging in other non-mining activities that support the uranium mining industry.

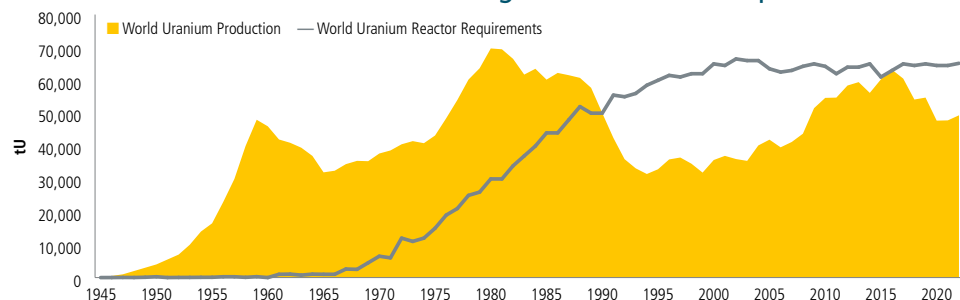

[^] Based on Morningstar's universe of Natural Resources Sector Equity ETFs as of 9/30/2024.

^{^^} The term "pure-play" relates directly to the exposure that the Fund has to the total universe of investable, publicly listed securities in the investment strategy.

Key Points

- 1. Pure-Play Uranium ETF** – A U.S.-listed uranium ETF focused on uranium miners and physical uranium.
- 2. Uranium Bull Market** – A new uranium bull market is likely underway as demand outstrips supply, nations seek energy security and prices have the potential to increase—incentivizing miners and providing opportunities to investors.
- 3. Critical Material in Meeting Energy Demand** – Uranium and nuclear energy may be critical to meeting the world's expanding need for electricity, and countries recently committed to tripling global nuclear energy capacity by 2050 to reach net-zero goals.
- 4. Supporting Energy Security** – Uranium and nuclear energy may help countries achieve a reliable and affordable source of electricity.

World Uranium Production is Not Meeting Nuclear Reactor Requirements

IMPORTANT DISCLOSURES & DEFINITIONS

An investor should consider the investment objectives, risks, charges and expenses carefully before investing. To obtain a Sprott Uranium Miners ETF Statutory Prospectus, which contains this and other information, visit <https://sprottetfs.com/urnm/prospectus>, contact your financial professional or call 1.888.622.1813. Read the Prospectus carefully before investing.

The Fund is not suitable for all investors. There are risks involved with investing in ETFs including the loss of money. The Fund is considered non-diversified and can invest a greater portion of assets in securities of individual issuers than a diversified fund. As a result, changes in a single investment’s market value could cause greater share price fluctuation than in a diversified fund.

The Fund’s investments will be concentrated in the uranium industry. As a result, the Fund will be sensitive to changes in, and its performance will depend to a greater extent on, the overall condition of the uranium industry. Also, uranium companies may be significantly subject to the effects of competitive pressures in the uranium business and the price of uranium. The price of uranium may be affected by changes in inflation rates, interest rates, monetary policy, economic conditions and political stability. The price of uranium may fluctuate substantially over short periods of time, therefore the Fund’s share price may be more volatile than other types of investments. In addition, they may also be significantly affected by import controls, worldwide competition, liability for environmental damage, depletion of resources, mandated expenditures for safety and pollution control devices, political and economic conditions in uranium producing and consuming countries, and uranium production levels and costs of production. Demand for nuclear energy may face considerable risk as a result of, among other risks, incidents and accidents, breaches of security, ill-intentioned acts of terrorism, air crashes, natural disasters, equipment malfunctions or mishandling in storage, handling, transportation, treatment or conditioning of substances and nuclear materials.

Shares are not individually redeemable. Investors buy and sell shares of the Sprott Uranium Miners ETF on a secondary market. Only market makers or “authorized participants” may trade directly with the Fund, typically in blocks of 10,000 shares.

Funds that emphasize investments in small/mid-capitalization companies will generally experience greater price volatility. Funds investing in foreign and emerging markets will also generally experience greater price volatility. Diversification does not eliminate the risk of experiencing investment losses. ETFs are considered to have continuous liquidity because they allow for an individual to trade throughout the day.

A higher portfolio turnover rate may indicate higher transaction costs and may result in higher taxes when Fund shares are held in a taxable account. These costs, which are not reflected in annual fund operating expenses, affect the Fund’s performance.

Sector weightings are determined using the Bloomberg Industry Classification Standard (“BICS”).
